November 11, 2013

**Abstract**

- 1 Introduction
  - 1.1 Physics motivation
  - 1.2 LHC heavy-ion running
  - 1.3 Detectors at the LHC
- 2 Event characterization
  - 2.1 Centrality determination
  - 2.2 Charged particle density
  - 2.3 Energy density
- 3 Particle spectra and yields
  - 3.1 Charged particle transverse momentum spectra
  - 3.2 Identified hadron spectra
  - 3.3 Strange particle production
  - 3.4 Resonance and light nuclei production
  - 3.5 Particle yields
- 4 Non-flow correlations
  - 4.1 Femtoscopic correlations
  - 4.2 Charged particle rapidity correlations
  - 4.3 Angular correlations
- 5 Flow correlations
- 6 Electroweak probes
- 7 Jet quenching
- 8 Heavy-flavour production
  - 8.1 Heavy-flavour particle spectra
  - 8.2 Heavy-flavour elliptic flow
- 9 Quarkonium production
- 10 Summary and outlook
